RGO_GF28_18V18_SLP_40C	SLP	Inline	yes
RGO_GF28_18V18_HPP_20C	HPP	staggered	4Q11
RGO_GF28_18V18_HPP_40C	HPP	Inline	4Q11

Summary

A full range of power pads is provided to enable the system designer different options for separate core power (VDD and VSS) and separate I/O padding power and ground (DVDD and DVSS). The ability to isolate separate power domains is also provided. In addition, the I/O library has a full complement of cells that provide the user with the ability to isolate analog I/O's and power within the same padding as the digital I/O's.

Includes:

- Programmable GPIO
- Programmable fault-tolerant GPIO
- Input buffer
- Power supplies
- Isolated analog power supplies
- Oscillators
- Full complement of support pads

ESD Protection

I/O pads are designed with robust ESD protection for all market segments. Passed:

- 2KV ESD Human Body Model (HBM)
- 200 V ESD Machine Model (MM)
- 500 V ESD Charge Device Model (CDM)

Form factor

Libraries are offered in both inline (core-limited) and staggered (pad limited) configurations.

Inline (core-limited) – 40µm x 58µm^[*]

Staggered (pad-limited) – 20µm x 117µm^[*]

SRx_BI_SDS_18V_STB/ FRx_BI_SDS_18V_STB

Description

SRx_BI_SDS_18V_STB / FRx_BI_SDS_18V_STB are programmable, multi-voltage (1.5V, 1.8V) general purpose, bi-directional I/O buffers with a selectable LVCMOS input or LVCMOS Schmitt trigger input and programmable pull-up / pull-down. In the full-drive mode, this buffer can operate in excess of 100MHz frequency with 15pF external load and 125 MHz with 10pF load, but actual frequency is load and system dependent. A maximum of 200 MHz can be achieved under small capacitive loads.

STx_IN_001_18V_NC

Description

STx_IN_001_18V_NC is an input pad

[*]Pad Sizes

Pad	Width	Height
SRP_BI_SDS_18V_STB	20	117
FRP_BI_SDS_18V_STB	20	120
SRC_BI_SDS_18V_STB	40	58
FRC_BI_SDS_18V_STB	40	60

OSx_BI_100_18V

Description

The OSx_BI_100_18V oscillator is designed to generate an asynchronous on-chip clock signal with an appropriate external oscillator crystal. The design has been optimized for a wide operating range, stability and minimum jitter using a wide range of industry standard crystals. The design has been characterized to allow a variation of 4pF to 18pF on each pin.

Key features:

- Programmable current for wide frequency range
- Frequency range of 1 MHz to 100 MHz
- DVDD options from 1.5V to 1.8V
- Bypass mode
- Power down (disable) mode
